

Land Rover Parts & Accessories

This section includes our range of Accessories suitable for the Land Rover Range Rover. We also include accessories which suit popular modifications to Range Rover vehicles - so don't think it's a mistake if you see something that doesn't usually fit original vehicles, because you can bet that someone has a modified vehicle it will fit.

You'll also see some items are photographed on other Land Rover vehicles - this is simply because we didn't have a

Range Rover to hand when the photographer called in - so just make sure you use the right reference number when ordering or check with one of our expert staff who will be able to advise on correct fitment.

PARTS: Beearthmach produces vehicle-specific catalogues listing our vast range of parts suitable for all Land Rover vehicles - make sure you get the latest edition for your particular vehicle.

NOTE: Manufacturers parts numbers are used for reference purposes only.

LAND ROVER RANGE ROVER

After the success of the original Land Rover in the early 1950s there was always pressure to produce a more stylish comfortable vehicle to appeal to a more upmarket clientele. There were a number of development projects in the 1950s, but due to limited funds nothing made it to production. The mid 1960s saw more favourable conditions for the development of a luxury 4x4 and so with the acquisition of the V8 3.5 engine from America and a revolutionary design concept by Spen King the Range Rover was launched in 1970.

The 100in chassis used provided tremendous wheel travel and a new gearbox was developed to cope with the V8's power. Coil sprung suspension was used and a locking diff added to its off-road abilities. A 5 door special edition model was created with the fashion magazine Vogue - this was so popular that the Vogue badged Range Rover became the standard 5 door model after the demise of the 3 door version in 1972.

The next two decades saw continual refinements added - such as a viscous locking diff and the world's first off-road ABS system. Another first was electronically controlled air-adjustable suspension - just when the competition was catching up to adopt coil springs.

The "Classic" continued in production until 1996, slightly overlapping the introduction of the P38 in 1994. As the "Classic" developed, its market position had moved gradually upward, hence the New Range Rover needed to compete in the luxury car market without compromising its best-in-class off-road capabilities.

The P38's 108" box section chassis was strengthened, the V8 engine was improved and 4-coil distributorless ignition was added to give a smoother engine with more power and torque. A 4.6 engine was added to the range in the HSE model. The range of the air-suspension was improved to give 5" variation in ride height and the beam axle arrangement was strengthened. The total package made the P38 the most capable off-roader in any class of vehicle let alone the luxury market.

A significant leap was therefore needed to build a vehicle for the 21st century and the BMW developed Range Rover L322 was launched in 2002. Only the 3rd Range Rover model in 32 years and the first with a monocoque bodysell. Almost every component was new yet it still keeps the essence of the original Land Rovers - and so the story continues...

CARBURETTOR AND INDUCTION MANIFOLD CONVERSION FOR ROVER 3.5 V8

KIT PART NUMBER - BR 2236

BR 2236R - Needle Valve Conversion Kit - Off Road Use

BR 2236F - Replacement Air Filter

BEARMACH is pleased to announce

a new complete carburettor and induction manifold kit from

WEBER. It is suitable for Rover V8 vehicles equipped with S.U. or Stromberg carburettors from 1970-1987.

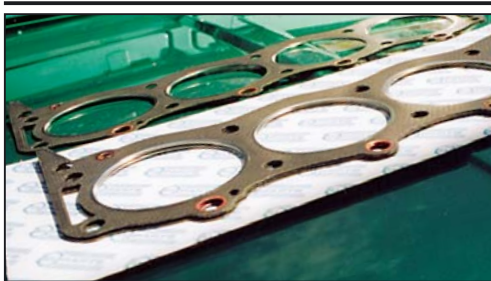

The kit features a Weber 4 barrel downdraught carburettor and dual plane induction manifold. The conversion has been developed for improved engine torque and fuel economy.

Although calibrated for Range Rover 3.5 models, it is also suitable for many other Rover V8 applications, and for those wishing to carry out engine tuning modifications. For applications other than Range Rover 3.5 models, calibration changes/adjustments may be necessary.

This conversion can be carried out by a competent D.I.Y. mechanic (with basic tool kit), and comes complete with detailed fitting instructions, covering various models.

The kit comprises of: Carburettor; Manifold; Air filter; Throttle linkage*; Fuel line connections/Fuel filter; Engine breather/pulse air system; Hose connections; All necessary gaskets, seals and fixtures.

*Automatic transmission vehicles will require supplementary kick down linkage kit - PART NUMBER BR 2236/A

HEAD GASKETS

BR 3178C V8 composite head gasket. To suit 3.5

ETC7819C Composite head gasket 1.2mm thick. To suit 3.9 and 4.2 engines.

MALLORY UNILITE DISTRIBUTOR

Accurate timing that's maintenance-free.
These Mallory Unilite distributors give you accurate, maintenance-free ignition timing. Instead of old-fashioned points systems, they have photo-optic LED triggering systems that never vary or wear out. You get increased rpm potential, improved combustion, longer spark plug life, and better cold-weather starting. Hooking one up is a simple 3-wire connection, and they come with your choice of adjustable mechanical and/or vacuum advance, self-lubricating bushings, and a Super-Duty cap and rotor.

- BA 5050** – Mallory Unilite Distributor
- BA 5051** – Mallory Distributor replacement cap
- BA 5052** – Mallory Distributor replacement arm
- BA 5053** – Mallory Distributor replacement module

A.R.B. AIR LOCKER DIFFS

A manually lockable differential which is operated at the driver's discretion by the push of a button. Locking and unlocking of the 'diff' is extremely rapid and can be achieved at any vehicle speed.

Installation involves bolt in replacement

of the original equipment differential centre, an air compressor and in-vehicle switch. Can be fitted to both front and rear axles without compromising on-road performance.

NOTE: All A.R.B. Diff Lockers require compressor which is available separately, order ref: – **BA 215**

DETROIT DIFF LOCKER

The Detroit Locker is a fully automatic locking traction differential that is well known for premium performance and dependable operation. Preload devices between the side gears deliver 100% torque and power to both drive wheels yet unlock automatically to permit necessary wheel speed differentiation. The Detroit Locker is trouble-free as it does not require service adjustments or special lubricants. Easy to install, no special tools or case modifications required. One year Limited Warranty.

BA 207 To suit Rover Differential. 10 spline, Locker (inc Carrier)*

BA 207A To suit Rover Differential. 24 spline, Locker (inc Carrier)*

* Please specify spline type when ordering.

DETROIT TRUE TRAC

This unit features a gear-type limited slip design (no clutch or friction plates to wear out). Its positive gear action automatically splits the torque with none of the steering problems associated with other traction 'diffs'. Power transfer is so smooth that it is unnoticeable through the steering wheel when fitted in front drive steering axles. It performs as a standard differential on normal

highway driving – then automatically engages when needed in wet, muddy or icy conditions.
